# Unique heat treatment equipment modernization saves money

SECONOMY is a mix of an economical and ecological approach. This is a unique offer designed by SECO/WARWICK for those who believe that both ideas can be combined.

**Your energy costs can be reduced up to 50%\***

**SECONOMY is not a marketing trick. It is a competitive strategy.**

The changes became a reality. There is no economic development without ecological thinking. At SECO/WARWICK, we were the first to adapt these new rules in both production and design. Experience shows that market pressures demand this type of offer - now we want to share this experience with you.

# In business one should think in the long-term and act reasonably

We offer an evolution, not a revolution. Due to our knowledge, skills and experience, we can improve your equipment performance in terms of productivity, energy efficiency and cost savings.

## How you can benefit from SECONOMY!

**1. Waste heat recovery** from heat treating processes for heating buildings and/or hot tap water.

**2. Reduction of heat loss up to 50%\*** by replacing the insulation using the latest insulation materials.

**3. Reduction of natural gas consumption up to 40%\*** after the modernization of the heating system. (Replacing of supplementing the existing combustion system with optional recuperation).

**4. Production cost savings up to 50%\*** by changing the fuel for heating from liquid or electric to gas.

**5. Optimization of work performance** by upgrading the control systems, which allows you to control motors in start-up and load matching to the current needs.

\* All values are approximate and do not constitute an offer. The actual reduction possibilities are calculated for each piece of equipment individually and may differ from those listed.
