

Measurement accuracy that translates into production quality

- Professional calibration of equipment used in heat treatment systems and other industrial processes where precision, measurement traceability and compliance with quality requirements are critical.
- In modern industry, even minor temperature deviations can affect product quality, production repeatability, and compliance with customer requirements and industry standards. That is why proper oversight of measuring equipment is not only part of a quality system, but also a practical tool for reducing risk.

Why SECO/LABTECH?

SECO/LABTECH is a calibration laboratory developed within SECO/WARWICK, created for companies for which reliable temperature measurement is critical.

The laboratory holds PCA accreditation AP233 and operates in accordance with the requirements of ISO/IEC 17025, confirming its technical competence and the high standard of its services.

An additional advantage is SECO/WARWICK's experience in designing and operating heat treatment systems. This makes it possible to consider not only the calibration process itself, but also the actual operating conditions of measuring equipment and its role in the entire technological process.

What does the customer gain by working with SECO/LABTECH?

- / Reliable results confirmed by PCA accreditation AP233.
- / Greater confidence in meeting quality, audit, and industry requirements.
- / Support with AMS2750 and CQI-9 requirements.
- / Reduced risk of nonconformities resulting from improper oversight of measuring equipment.
- / Efficient service delivery that supports production process continuity.
- / Better control over calibration schedules and equipment status.
- / Access to specialists who understand both metrology and heat treatment processes.
- / Greater confidence in and repeatability of temperature measurements.

Scope of SECO/LABTECH services:

- / Calibration of thermoelectric sensors,
- / Calibration of temperature indicators,
- / Technical support for temperature measurement and measurement traceability,
- / Assistance in planning calibration schedules and overseeing measuring equipment.

SECO/LABTECH – more than calibration

SECO/LABTECH combines metrology expertise with practical knowledge of heat treatment processes. As a result, its offering includes not only calibration services, but also technical support for organizations that want to better control their measuring equipment, reduce risk and maintain high quality in production processes.
