

Measurement components designed for demanding industrial processes

Reliable thermometric components for processes where accurate and stable temperature measurement directly affects production quality and repeatability.

Temperature is one of the key parameters in heat treatment processes. That is why the quality of measurement system components significantly impacts process stability, the repeatability of results, and equipment reliability.

What is SECO/COMPONENTS?

SECO/COMPONENTS is a specialized business segment of SECO/WARWICK dedicated to the production of temperature sensors and components for industrial furnaces and other demanding applications.

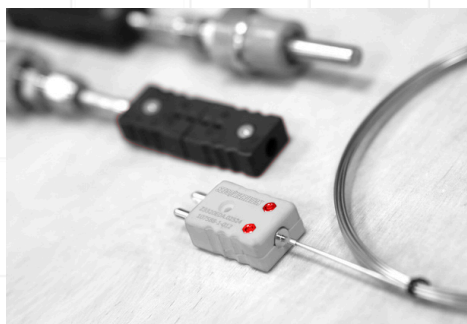

Practical experience is an important foundation of the SECO/COMPONENTS offering.

As a manufacturer of heat treatment equipment, SECO/WARWICK uses these components in its own solutions, providing deep insight into their operating conditions, process requirements and user needs.

What does the customer gain by choosing SECO/COMPONENTS?

- / Components designed to perform in demanding operating conditions.
- / Stable and repeatable parameters that support process control.
- / Solutions developed by a manufacturer that also uses them in their own heat treatment equipment.
- / Production carried out under a quality management system compliant with ISO 9001.
- / Quality control supported by careful supplier selection and verification.
- / The ability to plan scheduled component replacements and preventive maintenance activities.
- / Support in reducing the risk of unplanned downtime related to measurement system components.

The SECO/COMPONENTS offering includes:

- / Thermoelectric sensors,
- / Sheathed extension cables,
- / Specialized industrial thermometry components, and
- / Components for temperature measurement systems used in industrial equipment and processes.

SECO/COMPONENTS – more than components

Expertise in the design and construction of thermometric components is combined with experience gained from designing and operating heat treatment equipment.

As a result, SECO/COMPONENTS can serve not only as a product supplier, but also as a technical partner that helps select solutions suited to actual process conditions
